Turn Your Society Rooftop into a Source of Clean, Affordable Energy

Housing societies today face rising electricity costs for common areas such as lifts, water pumps, lighting and security systems. With rooftop solar from Roofsol Homes, your society can generate its own clean electricity, reduce energy expenses and build a more sustainable community.

Built on proven solar EPC experience, Roofsol Homes offers precision engineering, smooth installation and adaptable financing for residential communities.

Why Choose Roofsol Homes?

- Tailor-Made Engineering
- End to End Solar Service Provider
- Only the Best Components
- Experience That Delivers
- Flexible Financing Plans
- Post-Installation Support
- A Fully Digital Experience

Flexible Solar Investment Models for Societies

CAPEX Model - Own Your Solar Plant

In the CAPEX model, the housing society invests in installing the solar plant and becomes the owner of the system. This allows societies to enjoy maximum long-term savings on electricity bills while generating their own renewable power.

OPEX Model - Go Solar with Zero Investment

With the OPEX model, Roofsol installs and maintains the solar plant while the society simply pays for the electricity generated at a lower tariff than the grid.
